**MicroWorld's eScan Wins VB100% Award**

The security product has been awarded in a test conducted on Windows Vista x64.

EFY News Network ★★★★★ (1 Votes)

Friday, August 17, 2007: MicroWorld Technologies' antiVirus, antiSpam and content security product, eScan, has won the VB100% award in a test conducted on Windows Vista x64. With this award, eScan now confirms its technological superiority on Vista platform as well. The VB100% award is given to those products that pass the stringent parameters set by Virus Bulletin and detect all 'In the Wild' viruses, both on 'on demand' and 'on access', as well as give no false positives.

eScan is powered by MWL technology that creates a protective screen around the computer that is always 'on' and blocks any piece of malicious code from entering the computer. The software scans computers and flushes out all sorts of malware, while it also restores the system to the pre-infection state by cleaning registries and repairing other damages caused.

"As general awareness on security is increasing amongst buyers, more and more of them are checking out how independent reviewers evaluate the competing products before buying them. I must say that the continued approval from VB100% has significantly strengthened our position in the global market over the years," said Govind Rammurthy, CEO, MicroWorld Technologies.
