VB100% Awarded to eScan in Comparative Test

CRN Network, February 07 2008, 1800 hrs

MicroWorld eScan Corporate, a security solution that combines AntiVirus, AntiSpam and Content Security in one product has won a VB100% in a Comparative Test conducted on the Windows Server 2003 platform. eScan, is one of the few products that has consistently achieved this widely respected VB100% over the last few years. In the February review, the software showed excellent test results in malware categories such as In the Wild, File Infector, Polymorphic, Worms & Bots, DOS and Macro. The product managed this by using a combination of proactive and reactive technologies to identify malicious code.

“It’s quite gratifying to know that eScan has been awarded VB100% in the comparative test. The Virus Bulletin test is regarded as an absolute benchmark in the Security Industry and this result stands testimony to the effectiveness of our technologies and accuracy of Virus detection. We also realize that the award puts the onus on us to continue to maintain and exceed the quality standards of our product,” says Govind Rammurthy, CEO, MicroWorld.

As a security product that protects computers and networks against a gamut of threats, eScan is powered by many innovative technologies. This unique MWL technology enables eScan to intercept and block incoming threats at the transport layer of connectivity, thus placing it ahead of almost all other AntiVirus solutions which scan for files at the Application level.

The software uses advanced Behavioral Detection algorithms to block previously unknown threats and virus mutants, while it’s also empowered with technologies that repair changes made by Viruses in the system registry. Likewise, the Non Intrusive Learning Patterns used is a unique method in Spam Fighting. New version of eScan Corporate has some powerful features that give better control and more advanced means to the System Administrator to protect organizational networks. The management Console now provides options for installation,
