

eScan Linux Desktops

eScan for Linux Desktops is the comprehensive virus scanning software for machines running on Linux. This software safeguards you against over 1,50,000 viruses and other threats like Hackers, Spammers, Spyware, Adware, Keyloggers, Privacy related issues and Objectionable content.

Features

- eScan for Linux Desktops works as an on-demand software application that can be invoked as per your requirements.
- It has a sophisticated heuristic scan engine to capture new viruses and hidden threats.
- When viruses are detected, you can run preset actions like disinfect, delete the infected file, rename it, prompt for users action, etc.
- eScan reads inside the data stream of a file to detect hidden viruses.
- It comprehensively protects you from intruders like Spyware, Adware, Malware, Keyloggers and Hackers.
- The application can scan virtually all types of files including zipped and archived files.
- eScan for Linux has the facility of automatically downloading updates as per a schedule you can set.
- eScan for Linux has a menu that gives important information such as the date of virus signatures were downloaded the eScan anti-virus engine version and the total number of virus that can be removed.
- eScan allows you to select different objects in your system and scan them for viruses. You can select and scan any directory or file, your whole computer, directories in your system and also running process for memory resident viruses.
- When infected files are detected, you can set the action to be taken. The actions that can be preset include renaming the infected file, quarantining it to a special directory, cleaning the file and if that fails, either rename or delete the file, etc.
- Another feature is that you can select specific file types for scanning. Different file types like packed, mail databases, archived, plain mail, and self-extracting archived files.
- New viruses appear everyday. Updates are vaccines that detect and remove them. eScan can be configured to download updates from MicroWorld's free download sites.
- You can set a schedule to automatically scan your system at a preset time. When virus infected files are detected, actions you have selected earlier are run.
- eScan generates a comprehensive log of anti-virus activity. The log shows date and time when scanning was done, path and name of objects scanned.
