

eScan Linux Servers

eScan for Linux Servers is the comprehensive virus scanning software for Linux Servers. It offers a complete and secure anti-virus security solution that detects and removes over 1,50,000 viruses and threats like Hackers, Spyware, Adware, Key loggers, Privacy related issues and Objectionable content.

Features

- eScan for Linux Servers has a "Monitor" feature which allows you to configure settings like the cache size, number of threads (files) that can be scanned simultaneously and set the maximum size up to which files should be scanned. You can also quarantine infected files.
- Has a menu that gives important information such as the date of virus signatures downloaded, the anti-virus engine version and the total number of viruses that can be detected and removed.
- eScan allows you to select different objects in your system and scan them for viruses.
- It comprehensively protects you from intruders like Spyware, Adware, Malware, Keyloggers and Hackers.
- When infected files are detected, you can set action to be taken. The actions that can be preset include renaming the infected file, disinfect the file and if that fails, either rename or delete the file, etc.
- You can select specific file types for scanning. Different file types like packed, mail databases, archived, plain mail, self-extracting archived files, etc. can be selected.
- eScan can be configured to connect automatically to these sites and download updates.
- You can set a schedule to automatically scan your system at a preset time. You can also set the actions that should be run when virus infected files are detected.
- eScan generates a comprehensive log of scanning activity. The log shows date and time when scanning was done and path of objects scanned.
- Real-time Intelligent Monitor to guard your system.
- Configuration and management through a web interface.
- Ability to scan files automatically as they are modified and closed in real time.
- Quarantines infected files.
- Ability to skip scanning of files with specified extensions.
- Scans files in real time with the specified include directories.
- Exclude scanning files in real time with the specified exclude directories.
- Command line scanner for automation and scheduling.
- Automatic and manual download of updates

Approved and Certified by

Available Platforms :

Works with
Red Hat Linux 7.1 and Above

Minimum Hardware Requirement:
Intel® Pentium III with 128 MB RAM
40 MB of free space
