Trojan horse allows attacker connect to Internet through your computer - Trojan-Proxy.Win32.Agent.y

A malware named Trojan-Proxy.Win32.Agent.y is on the prowl and like other members of its family, this one too facilitates a remote

Trojan horse allows attacker connect to Internet through your computer - Trojan-Proxy.Win32.Agent.y

attacker to access the Internet via a compromised computer, say security experts at MicroWorld Technologies.

Win32.Agent.y comes to your computer when you download many dubious, free applications from the Internet. Drive-by-Download is another mode of propagation for the Trojan as malicious websites force it into computers by exploiting browser vulnerabilities, where all you need to do is to view those websites to get infected.
