## MWAV 7.0 released with advanced features

Released by: MicroWorld  
2005-08-19 00:36:02

### Summary:

MicroWorld's MWAV 7.0 released with advanced features

### For Immediate Release:

"There are any number of people who've availed of our free Anti-virus Toolkit Utility (MWAV) to scan their systems for viruses and other malicious programs," says Govind Rammurthy, CEO, MicroWorld Technologies. "And invariably, those who chose to send feedback after using it, expressed their desire to buy the entire eScan Security Suite. To me, this more than anything else confirmed what many say about MWAV – that it is possibly the best free Toolkit Utility for a fair mile around."

MicroWorld Technologies Inc., among the leading Security Solutions provider, with offices in the USA and India, and elsewhere, released MWAV 7.0 with advanced features. MWAV 7.0 is now available with automatic updation feature, and automatic language detection feature, with facility built in for seven languages, and its detection capability and effectiveness has been expanded to include thousands of Spyware and Adware.

Andy Gardner, one of numerous MWAV users, wrote in to say that he used MWAV to scan his system and "found some nasties and got rid of them." There is no end to nasties on the Internet. Viruses, Spyware (Adware, Keyloggers, Trojans, System Monitors, Browser Hijackers and Illegal Diallers), Worms and the like. MicroWorld AntiVirus Toolkit Utility (MWAV) detects everyone of these.

The best thing about MicroWorld's Anti-virus Toolkit Utility (MWAV) is not that it is free, but that new features are added to it continually as with commercial products, making MWAV a must-have on your system to detect viruses, and spyware. "Excellent program. I consider it to be the best free virus toolkit on the Internet. I am a member of a help forum and it has helped countless members get rid of viruses and trojans," wrote in John D. Ward, another MWAV user.

MicroWorld invests development efforts to equip you to fight malicious programs and secure your data, and with the award-winning MWAV it does it for free. MWAV detects viruses and other malicious programs that eScan removes. MicroWorld's eScan range of products ensure Anti-virus and Content security for systems.

Only recently, MWAV came up against CoolWebSearch, a browser hijacker that hijacks your browser and leads you to pseudo sites that mimic real ones. Gullible users, or those lacking detection measures like MWAV become vulnerable to fraud. MWAV busted CoolWebSearch, and it's only one among the thousands that it now successfully detects and cleans new variants. Spyware present difficult challenges to the objective of keeping systems free of fraudsters because it's used in collecting credit card details, Social Security numbers, usernames, passwords, addresses and other personal information.

MWAV detects and cleans registry errors caused by viruses and spyware, improving system performance and stability, and MicroWorld is engaged in further upgradation to strengthen MWAV with even more newer features.

"It's a long journey no doubt, and it's not down to just stamina to keep up the fight, you've got to be sure-footed," Govind Rammurthy concludes.
