### Description:

Close on heels of a Russian gang that stole a million Euros from French banks using sleeping bugs, as earlier reported by MicroWorld Technologies, a Brazilian hacker racket has been nabbed for looting almost 5 million dollars from over 200 bank accounts. The raid happened in the state of Paraiba, 1,800 km North-East of Rio de Janeiro. What's more annoying is that the gang leader is a 19 year old and many of his accomplices are minors.

It works like this; through an email that holds a website link, a Trojan sneaks into your computer. The link may be a purported greeting card or a small computer utility. Once you click on it, the malicious code will be installed into your PC.

The Trojan remains dormant till you go to an online banking site. Authentication gadgets and biometric advancements are futile here, as this smart one waits till you go through all that routine. No sooner you log on to the personal bank account the bug will swiftly act and transfer the money to another account!

"This Trojan is like a thief who hides behind your back and loots your belongings after you open your safe locker. With some smart social engineering thrown in, this malice spreads faster and wider in targeted groups." explains Govind Rammurthy, CEO, MicroWorld. The Michigan based Security firm has a special team of experts to identify this breed of Trojans through an advanced technology.

"Online account theft is an easy job once you have the user authentication. All you need is the routing number and the account number for fund transfer. While banks will need to strengthen security and user awareness from their side, account holders need to use a Real-Time Security Solution than can defeat new threats as well as hidden malice. Because, being under-protected is equal to being unprotected!" views Govind Rammurthy.

**MicroWorld**  
MicroWorld ( [www.mwti.net](http://www.mwti.net) ) are the developers of the world's first Real-Time Anti-Virus and Content Security software eScan for desktops and servers. Its communication security software, MailScan is the first comprehensive e-mail scanner for your SMTP/POP3 Mail Server. MicroWorld Winsock Layer (MWL) is the revolutionary technology underlying these products, powering them to several certifications and awards by some of the most prestigious testing bodies, notable among them being Virus Bulletin, Checkmark, TUCOWS, Red Hat Ready, and Novell Ready. Combining their powerful scanner with MWL technology, MicroWorld solutions provide a Real-Time Proactive security for your systems. For network security of enterprises, eConceal Firewall is the latest powerful offering from MicroWorld.
