» [Outpost Enforcing System Reboot with 'outpost_ipc_hdr' Mutex Vulnerability](#)

2007-06-04 15:10:41.0

A vulnerability in the way Outpost Firewall handles an internal mutex called outpost_ipc_hdr allows local attacker to capture this mutex which in turn will cause the Outpost program to misbehave, which in turn forces the user to reboot the system.

2007-05-31 10:37:18.0

A new wave of Trojans is using phishing-type techniques to steal users' bank details. BanKey.A and BankFake.A are the latest such examples. When run, both Trojans show users a page that looks like an online bank website for them to enter their bank passwords and account numbers. However, if users do so, they will be revealing this data to malware creators.

Here is your documents?, ?Mail Delivery System?, ?Mail Transaction Failed? or ?Re: Thank you for delivery?. If you chance upon a new mail in your mailbox with any of these lines in its subject field, carrying an attachment, apply caution! It's a new Worm named Cheburgen.a and the email mode of proliferation is just one of many ways in which it can wriggle into computers, say experts at MicroWorld Technologies.

» **Survey Reveals Scandal of Snooping IT Staff**

2007-05-31 10:18:31.0

Whilst you sit at your desk working innocently away, little do you realize that one in three of your IT work colleagues are snooping through company systems, peeking at confidential information such as your private files, salary data, personal emails, just by using the special administrative passwords that give IT workers privileged and anonymous access to virtually any system.

» **HP SIM 5.0 Session Fixation Vulnerability**

2007-05-23 12:07:50.0

There is a session fixation vulnerability in HP Systems Insight Manager 4.2 and 5.0 SP4/5 (IM) that allows an attacker to gain administrative access to IM console. As a result, the attacker can take complete administrative control over all managed systems, upload and execute malicious code on them, extract any information from them and disable them at her will.
