

One Year Licence For MWAV 8.0

Published 4th January 2006

MicroWorld, a company which made the world's first Real-Time Anti-Virus and Content Security software eScan for desktops and servers, has introduced a one year license for MWAV 8.0 for its toolkit utility.

MWAV 8.x comes with a new improved GUI for better usability and effectiveness, powerful spyware and adware detection. Intelligent detection and disinfection of registry entries of viruses, spywares, adwares and other malice.

Great care and focus is applied to find out every new threat in the form of virus, spyware, adware etc. The utility is consistently updated with the same immediately. In depth R&D is employed by MicroWorld, to improve the intelligence and firepower of the system, all the time.

MWAV 8.x comes with additional features such as it scans computer completely and provides reports of any virus, worm or Trojan found. It checks for all illegal dialers that are present on the computer and informs the users of the same.

It informs the users of all spyware, adware, keyloggers etc in your computer. The ability to make MWAV as a "start-up" program, through the scheduled tasks list, so that it scans your computer every time you start using it. The most updated and the largest list of known viruses and auto updating options. There is no need to install. Just download and run the MWAV toolkit to scan for viruses.

MWAV 8.x also provides multi-language support, the most recent one being Chinese.

MWAV was earlier sold on a monthly basis and the user was required to renew the licence every month.
