Widely regarded as a Benchmark Test in AntiVirus Quality Assessment, VB100% employs a comprehensive method in testing various AntiVirus products in the present day market. The participating products in the test are checked against Malwares belonging to different categories like; In the Wild, File Infector, Polymorphic, Worms and Bots, DOS and Macro Viruses

According to the results of the study, eScan stood out as one of the very few products that showed 100% detection record in all categories, while many other products failed to achieve the same level of accuracy. "eScan wins another VB100 with some style," said renowned security tester from VB100 in his review note, John Hawes.

"Right from day one, we believed that our protection is good enough only if it's capable of fighting and defeating the complete range of harmful programs and risky stuff that target information systems," says CEO, MicroWorld Technologies, Govind Rammurthy. "The threat landscape is undergoing a dramatic transformation at present, as attacks are becoming more targeted and financially motivated, while the amount of user interaction required for an incursion to be successful is getting lesser and lesser."

"It means a malware writer can take over someone's computer completely and still have him or her not knowing what's going on. The only way to remain safe is to have a continuously updated security system that provides total protection against every possible piece of malicious code trying to sneak into computers. The prestigious honor from Virus Bulletin tells us that we are in the right direction!" Govind points out.

eScan Internet Security Suite is not just an AntiVirus system. It's a comprehensive security solution that offers Protection against Viruses and Malware, Multilayered Spam Control system propelled by an innovative technology called Non Intrusive Learning Patterns, Proactive Anti-Phishing, Content Security, Intelligent Web Filter and Parental Control.

One of the main reasons why the product is becoming popular among computer users across the world is its install and forget nature, according to independent security experts. The protection mechanism of eScan is powered by a unique technology called MicroWorld Winsock Layer, which enables the software to block all kinds of threats at the transport layer. This ensures that online perils are intercepted and destroyed on the fly, thus creating a security screen around computers. In a converging world where a "Unified Threat Protection" is the buzz phrase, eScan's growing popularity shouldn't come as a big surprise to many.
