MicroWorld releases new version of eScan Corporate

[SerifNon Serif](#)

May 2007

MicroWorld Technologies has launched a new version of eScan Corporate that is compatible with Windows Vista and 64-bit Windows.

"With this new release we ensure that we continue to pack the best-of-breed technologies and algorithms in antivirus, antispam and content security components of eScan," said Govind Rammurthy, CEO of MicroWorld Technologies. "These new features not only add more power to the individual modules of the software but also enhance centralised security management of an organisation's IT infrastructure."

He continued, "The antivirus system of eScan offers protection against all kinds of malware with the earliest detection of new viruses and worms in HTTP and FTP traffic. Harmful stuff like adware, spyware and greyware are also detected and removed".

For blocking spam, the new eScan uses a combination of technologies along with MicroWorld's unique NILP technology. Content security is strengthened with newer algorithms and extensive filtering methods.

Policies with multiple categories can be enforced on different user groups so that, as an administrator you have total control and flexibility in deciding who accesses what, Govind added.

Non intrusive learning patterns (NILP) is a mechanism for spam and phishing control. This technology observes user's behavioral patterns and based on the analysis, it judges whether a mail is spam or not. The system works on AI principles so that it acts as a self-learning mechanism that spots spam with the best accuracy.
