**SecurityProNews: Backdoor Trojan Threatens To Take Over User Computers**

Aug 8, 2006, 07 :33 EST (0 Talkback[s])  
 (Other stories by [Btv Raj](#))

"Security analysts at MicroWorld Technologies inform that 'Win32.SdBot.asr' slips into user computers via Trojan Downloaders or through manual downloads from the Internet. The Trojan Bot is a Windows PE DLL file created in 'C' and packed with WinUpack.

"'Win32.SdBot.asr' can execute programs, reboot the system, open files, open webpages in the default browser of the host, download files, launch and manage a Proxy Server on the victim machine, redirect information sent to local port towards a remote port and send out system information to the remote attacker. The backdoor will also log on to specific websites to update, upgrade and mutate towards better capabilities."
