» [USB Flash Drive worm from the "good guys"](#)

2007-06-21 16:21:06.0

Sophos has discovered a worm which copies itself onto removable drives, such as USB flash drives, in an attempt to spread information about AIDS and HIV.

2007-06-21 16:01:50.0

In the office I often use different word processors and text writing software applications. The majority of my output files are generated by the nifty (especially for a long time Windows user) option "Print &gt; Save to PDF". In a number of cases I needed a bit more private PDF documents, password protection would be just enough.

2007-06-21 15:59:21.0

When it comes to security, Mac OS X has proved on numerous occasions that it is quite safe, right out of the box. However, that doesn't mean it cannot use additional security to prepare it for the Wild West we call the Internet. Enter DoorStop X - a comprehensive approach to securing your Mac.

» **Counting the Cost of Cyber Crime**

2007-06-21 11:57:17.0

It has been a busy month in cyberspace. TJX, the massive worldwide fashion retailer, is finally releasing some of the gory details of the recent hack which saw over 45 million credit and debit card details stolen from their databases.

» **Disasters and SMBs: Plan to Survive, Don't Fail to Plan**

2007-06-21 11:53:27.0

Industry studies report that more than 90 percent of business records are now produced electronically. However, almost half of these records are never reproduced in paper form. When a disaster occurs, small businesses may be faced with lost data, downgraded revenue forecasts, loss of customer confidence and sometimes potential liability.

» **Snort: IDS Done Well (and Good)**

2007-06-21 11:47:39.0

A few years ago, when we spoke of network intrusion security systems, we spoke of IDS (Intrusion Detection System) appliances. Recently, as the emphasis has shifted from detection to prevention, IDS has become IPS (Intrusion Prevention Systems).
