**MicroWorld to Launch Futuristic Network Firewall**

By Team HexaTimes.

MicroWorld Technologies launched its futuristic, enterprise class firewall eConceal. EConceal is a comprehensive network firewall developed to prevent unauthorized access to a computer or network connected to the Internet. It enforces a boundary between two or more networks by implementing default or user-defined Access Control Policies or Rules.

'Stealth Mode' option is a powerful feature that allows you to surf the Internet invisibly, without letting other online users see you. In this mode your system does not respond to continuous information requests flowing in from other computers.

Internet Services option of eConceal gives you Total Content Security with Website Filtering and Pop-Up Blocking. In Enterprises, system administrators can ensure that access to offensive, pornographic and non-productive websites are blocked completely to streamline operations and improve efficiency. Apart from its superior technology and robust functionality, eConceal also breaks away from the myth that firewalls are difficult to understand and hard on usability.

Govind Rammurthy CEO, MicroWorld Technologies revealed "eConceal is a perfect fusion of some refreshingly new ideas, 'out of the box' thought processes and our Pioneering knowledge in Information Security. When we decided to break away from the norm, we also wanted to break a new path to redefine the scope and leverage of a firewall.
