## eScan bags VB100% award for Vista x64

By ZDNet India Staff, August 20, 2007 eScan has won the VB100% award in a test conducted on Windows Vista x64.

VB100% employs a comprehensive pool of virus samples in the Wild while evaluating various products. The award is given only to those products that pass the stringent parameters set by Virus Bulletin and detect all 'In the Wild' viruses, both n 'On Demand' and 'On Access', as well as give no false positives.

"Each time eScan wins the award from Virus Bulletin, we take it as an authoritative reassurance on the way we are advancing our product in technology and architecture," says Govind Rammurthy, CEO, MicroWorld Technologies. "Our continued effort is to mix proactive and reactive technologies in malware and riskware protection, and this test is an assured way of sizing up the overall effectiveness of the end product. We are honored that we consistently live up to the VB100% standards!"

The MWL technology creates a protective screen around your computer that's always 'on' and blocks any piece of malicious code from entering the computer. The software comprehensively scans computers and flushes out all sorts of malware, while it also restores the system to the pre-infection state by cleaning registries and repairing other damages caused.

"As general awareness on security is increasing among buyers, more and more are checking out how independent reviewers evaluate the competing products before buying them," said Govind Rammurthy.
